Batch-12

Task Description #1 – Stack Implementation

Task: Use AI to generate a Stack class with push, pop, peek, and is_empty methods.

Sample Input Code: class Stack:

pass

Expected Output:

- A functional stack implementation with all required methods and docstrings

PROMPT:

#Write a code to generate a stack class with push, pop, peek and isEmpty methods

CODE:

```

• lab6.py > ...
1  #Write a code to generate a stack class with push,pop,peek and isEmpty methods
2  class Stack:
3      def __init__(self):
4          self.stack = []
5      def push(self, item):
6          self.stack.append(item)
7      def pop(self):
8          if not self.isEmpty():
9              return self.stack.pop()
10         else:
11             raise IndexError("Stack is empty")
12     def peek(self):
13         if not self.isEmpty():
14             return self.stack[-1]
15         else:
16             raise IndexError("Stack is empty")
17     def isEmpty(self):
18         return len(self.stack) == 0
19 # Example usage
20 if __name__ == "__main__":
21     stack = Stack()
22     stack.push(1)
23     stack.push(2)
24     stack.push(3)
25     print(stack.peek()) # Output: 3
26     print(stack.pop()) # Output: 3
27     print(stack.isEmpty()) # Output: False
28     print(stack.pop()) # Output: 2
29     print(stack.pop()) # Output: 1
30     print(stack.isEmpty()) # Output: True
31

```

OUTPUT:

```

Task Description #4 – Binary Search Tree (BST)

Task: Use AI to create a BST with insert and in-order traversal methods.

Sample Input Code: class BST: pass

Expected Output:

- **BST implementation with recursive insert and traversal methods. PROMPT:**

#Write a code to create a binary search tree and inorder traversal methods using recursive insert and traversal methods

CODE AND OUTPUT:

The screenshot shows a terminal window with several tabs at the top: palindrome.py (closed), lab6.py, lab1exam.py, lab4.py, lab2.py (marked with a '1' in red), and lab5.py. The current tab is lab2.py. The code itself is a Python script for a Binary Search Tree (BST) implementation. It includes classes for TreeNodes and a BinarySearchTree, along with methods for inserting values and performing an inorder traversal. The code is color-coded for readability.

```
palindrome.py > BinarySearchTree > _insert_recursive
1 #Write a code to create a binary search tree and inorder traversal methods using recursive
2 class TreeNode:
3     def __init__(self, value):
